

Climate change strategy in Gipuzkoa

Project details:

Client: Guipúzcoa Regional Government / Gipuzkoako Foru Aldundia

Date: 2017-2018

Country: Spain

Area of Activity: Environment

Main Activity: Strategic environmental consultancy

Drafting of Guipuzcoa's 2050 strategy to combat climate change (EGLCC 2050)

Climate change is a matter of great interest at both the international and local level. The Guipúzcoa Regional Government has therefore supported the creation of its own strategy to combat this problem within its territorial scope, and Prointec is responsible for its development.

The drafting of Guipuzcoa's 2050 strategy to combat climate change (EGLCC 2050) is proposed in order to establish, within the historic territory of Gipuzkoa, a proprietary transversal model of climate governance for all the departments and policies in the Gipuzkoa Regional Government, with a long-term time frame that corresponds to the goals and action lines in the Basque KLIMA 2050 strategy, international climate actions and the transition towards a low-carbon economy.

The document drafted by Prointec analyses the situation of Gipuzkoa in this area and includes a series of objectives, programmes and lines of action to plan the fight against climate change in the territory, and the indicators and assessment measures to monitor it. At the operational level, the strategy involves promoting the use of renewable energies, eco-industries, sustainable mobility and the circular economy.

The 2050 strategy to combat climate change has the following components:

- Global and European background; situation of the LCC in Euskadi and the role of the Gipuzkoa Regional Government.
- Milestones in the 2050 strategy to combat climate change and analysis of the strategic capacity for transformation.
- Criteria, objectivity and competences for the development of the EGLCC 2050.
- Programme principles, general objectives and climate objectives of the EGLCC 2050.
- Competences, capabilities and potentialities of the DFG for the development of the EGLCC 2050.
- Structure and procedure for the preparation of the EGLCC.

- Diagnosis of the main emitting sectors: inventory of greenhouse-gas emitting sectors in Gipuzkoa and potential climate change impacts.
- Analysis of the social perception of climate change in Gipuzkoa.
- Table of indicators for the fight against climate change.
- International benchmarking of initiatives in the fight against climate change.
- Lines of action, priority actions and schedule of the EGLCC.
- Monitoring programme for assessing the results of the EGLCC.
- Model of governance, public participation and awareness-raising.
- Economic-financial analysis of the EGLCC.
