

## Conservation and operation of first-generation highways

### Project details

**Customer:** Department of Roads at the Ministry of Public Works

**Date:** 2017

**Country:** Spain

**Area of Activity:** Roads

**Main Activity:**

Supervising the work of conservation and operation by the concession company

### **Supervising the work of conservation, maintenance and operation by the concession company for the Autovía de Alicante dual-carriageway, Spain**

Since 2008, Prointec has supervised the initial works of refurbishment, and subsequently the maintenance and operation of the Autovía de Alicante dual carriageway, A-31, in the section between La Roda and Bonete in the province of Albacete. This section comprises two main roads, 27 junctions and several sections of roads and slip roads with a length of 94.2 km.

Prointec's main role in this project consists of providing technical advice for the concession's inspecting engineer to ensure compliance with the requirements and conditions governing the conservation works and the operation and maintenance tasks performed by the concession company for this section of dual carriageway.
