

National Archaeological Museum, Spain

Project details

Client: Ministry of Culture

Date: 2014

Country: Spain

Total investment: 33 million euros

Area of Activity: Architecture

Main Activity:

Drafting of Projects and Project Management

Other relevant information:

Area: 30,000 m²

Drafting of Projects and Project Management in the refurbishment and expansion of the National Archaeological

The National Archaeological Museum, located in Madrid, has undergone a profound transformation in the refurbishment carried out between 2008-2014.

This main challenge of this refurbishment was to adapt the building, dating from the 19th century, to the new institutional and technological needs of the 21st century. In this light, the original façade was kept intact and the structures, installations, architecture and interior finishes were fully refurbished, with specific interventions in the outdoor urbanisation areas.

The work led to an increase in the net floor area of the museum, from 27,000 m² to 30,000 m², and the exhibition space has also increased from 6,000 m² to 9,300 m², distributed in 40 rooms.

Prointec drafted all the projects and took on the Project Management. The main work undertaken was:

- Drafting of the Basic Architecture Project
- Drafting of the Architecture Execution Project
- Drafting of Specific Installation Projects
- Drafting of Specific Foundation and Structure Projects
- Architecture Project Management
- Site Management
- Coordination of Health and Safety in the Project and Execution Phase
