

Control of treatment plants in Castilla-La Mancha, Spain

Project details

Country: Spain

Customer: Castile-La Mancha Water Infrastructures

Date: in progress

Area of Activity: Water

Main Activity:

Supervision of control and maintenance

Monitoring and surveillance for the control and maintenance of 56 treatment plants in Castilla-La Mancha

Prointec's services within the framework of this project aim to carry out the surveillance and control of the running of the sewage and wastewater treatment facilities in a defined area of Castilla-La Mancha. Specifically, this area is made up of 56 small and medium-size wastewater treatment plants.

Prointec's primary objective in this project is to verify that the concession company is operating the treatment plants correctly and in accordance with the guidelines of the European technical regulatory framework applicable to this type of facility. The main activities carried out by the company are as follows:

- Analysis and monitoring of the state of conservation of the facilities
- Assessment and monitoring of costs and quality of service provided by operators
- Analytical control of the facilities
- Operating control
- Analysis of the running of the facilities
- Supervision of the supply, assembly and maintenance of mechanical equipment
- Surveillance work of actions in the field of civil engineering
- Environmental monitoring functions
